Science — Unit 3 — Study Guide Practice · Grade 6

The Repair Café Challenge

Answer 15 short questions in about 10–15 minutes. Choose one answer or write the missing word. Check your answers at the end.

> You help at a neighbourhood repair café. Follow materials from the workshop to the garden and help the team make less waste.

1 Which list contains only raw materials found in nature?

- Wood, oil and sand
- A chair, a bottle and a window
- A notebook, a can and a jacket
- Paper, a spoon and a toy

2 What happens when waste is recycled?

- It is buried and left in a landfill
- Its materials are processed to make new products
- It is stored without being changed
- It is always burned to produce heat

3 In the garden, tiny living things break down organic waste. The finished material added to the soil is called _____.

4 Which plan sorts these materials correctly? The local collection program accepts the empty plastic container.

- Recycle the food scraps; compost the tin can and plastic container
- Compost all the materials together
- Recycle the tin can and plastic container; compost the apple core and healthy seed-free plants
- Recycle the plants; throw away the tin can and plastic container

5 A mill collects old cardboard. Name the thin material used for writing that it can make from the recovered fibres.

6 A factory recovers plastic from used PET bottles. Which product can it make for winter clothing?

- Cotton fabric
- Wool yarn
- Leather
- Polar fleece

7 Food scraps are sent to a well-managed composting site instead of a landfill. Why can this help the climate?

- It keeps all gases inside the food forever
- It can reduce methane released from landfilled food
- It turns plastic into clean air
- It stops every source of air pollution

8 A farmer uses the material made at a composting site in a field. How can this reduce the need for chemical fertilizers?

- It removes all minerals from the soil
- It prevents every plant disease
- It provides some nutrients that plants need
- It replaces all the water needed by crops

9 A manufacturer uses recovered materials instead of only new resources. What can this help save?

- Raw materials
- Landfill space only
- The need to sort waste
- Every kind of fuel completely

10 What benefit do recycling and composting share?

- They make every discarded object disappear
- They turn all waste into food for people
- They make sorting unnecessary
- They keep useful materials out of the garbage sent to landfills

11 You clean an old mug and use it as a pencil holder. Which of the three Rs describes this action?

12 At a sorting centre, which object can an ordinary magnet pick up?

- An aluminium drink can
- A glass jar
- An ordinary steel food can
- A plastic cup

13 In moist soil, which usually breaks down sooner, an uncoated paper bag or an ordinary plastic bag?

- The plastic bag
- The paper bag
- They always take the same time
- Neither can ever change

14 Trucks take mixed recyclable containers to a facility where workers and machines sort them. Is this a landfill or a recycling plant?

15 You cut a healthy basil stem and place its base in water to grow roots. What method are you using?

- Growing from seeds
- Pollination
- Composting
- Propagation with cuttings
