Science — Unit 3 · Grade 6

Robo-Spud's Zero-Waste Picnic

Complete 12 tasks in about 10–15 minutes. Choose an answer or write one word. Check your answers when you finish.

> Robo-Spud, a potato-shaped robot, needs your help! Plan a picnic with less waste, visit a sorting centre and check the garden. This adventure is made up.

1 You buy apples for the picnic. Which choice reduces packaging waste before it is created?

- Buy each apple in its own plastic bag
- Add a second bag around the apples
- Buy loose apples without extra wrapping
- Ask for an extra empty bag

> **Answer:** Buy loose apples without extra wrapping
> Reducing means preventing waste. Loose apples do not need individual wrappers.

2 You wash an empty jam jar and use it to hold pencils. Which of the three Rs describes this?

- Reuse
- Reduce
- Recycle
- None of the three Rs

> **Answer:** Reuse
> The jar is used again for another purpose without being made into a new material.

3 Old glass bottles are melted and made into new bottles. What happens to the glass?

- It is repaired
- It is thrown away
- It is used again without being changed
- It is recycled

> **Answer:** It is recycled
> Recycling processes discarded materials to make new products.

4 At the sorting centre, which item can a magnet pick up?

- An aluminium drink can
- An ordinary steel food can
- A glass bottle
- A plastic cup

> **Answer:** An ordinary steel food can
> Ordinary steel food cans contain iron and are attracted to magnets. Aluminium is not.

5 Robo-Spud traces a paper napkin back to a tree. Which raw material from the tree can supply its fibres? Write one word.

> **Answer:** wood
> Wood fibres can be used to make paper. Paper can also be made with recycled fibres.

6 You are unsure whether a picnic package belongs in your recycling bin. What should you do?

- Put it in because it looks like plastic
- Check your local collection's current instructions
- Follow a rule from another country
- Assume every kind of package is accepted

> **Answer:** Check your local collection's current instructions
> Accepted materials and collection instructions can differ between programs and change over time.

7 Which pair can go into Robo-Spud's backyard compost pile?

- Glass pieces and bottle caps
- Plastic cups and aluminium foil
- Apple cores and dry leaves
- Steel cans and broken plates

> **Answer:** Apple cores and dry leaves
> Fruit scraps and dry leaves can break down in a well-managed compost pile.

8 You mix finished compost into the garden soil. What is a benefit?

- It adds organic matter and nutrients
- It replaces all the water plants need
- It stops all living things in the soil
- It makes every plant grow at the same speed

> **Answer:** It adds organic matter and nutrients
> Compost is added to soil to improve it. It supplies organic matter and helps the soil hold nutrients and moisture.

9 Robo-Spud finds a chart showing how long litter takes to break down outdoors. How should you read its times?

- As exact deadlines for every place
- As proof that all materials break down equally fast
- As times that change only with an item's colour
- As estimates that depend on the material and conditions

> **Answer:** As estimates that depend on the material and conditions
> Materials and conditions such as moisture and temperature affect breakdown. A chart cannot give one exact time for every place.

10 In a made-up trial, one onion leaf measures 2 cm on day 1 and 6 cm on day 5. Which conclusion fits these observations?

- That leaf grew by 4 cm during the trial
- Every onion always grows by 4 cm in five days
- The leaf became 4 cm shorter
- The onion no longer needs water

> **Answer:** That leaf grew by 4 cm during the trial
> The measured change is 6 − 2 = 4 cm. These observations describe this leaf during this trial, not every onion.

11 You grow a new basil plant from a piece of stem, without seeds. Which type of reproduction is this?

- Sexual reproduction
- Asexual reproduction
- Pollination
- Seed germination

> **Answer:** Asexual reproduction
> A stem cutting can grow into a new plant without the joining of sex cells.

12 A new plant has the same genetic information as its parent plant. What word from Unit 3 names this genetic copy? Write one word.

> **Answer:** clone
> A clone is a genetic copy of its parent. The plants can still grow differently in different conditions.
